Dimension	2000 x 540 x 900 mm
Color	Grey
Material	Beton C30 / 37
Weight	1500 kg
Shipping time	After the production time

Description

The New Jersey concrete barrier is a professional road safety solution designed for effective traffic control and area protection. Manufactured from high-strength C30-C37 concrete and reinforced with steel, it offers exceptional durability, impact resistance and long service life. With a weight of 1,500 kg, the barrier provides excellent stability without the need for permanent anchoring.

The barrier can be installed individually or connected in continuous systems, making it suitable for road closures, lane separation, parking area protection, construction sites and public events. Its technical specifications include a height of 900 mm, a base size of 2000 x 540 mm, grey color and steel-reinforced concrete construction.

According to road traffic regulations, the use of road barriers on public roads requires appropriate traffic signs placed at a suitable distance before the obstacle. The New Jersey barrier is fully compatible with such requirements and is commonly used as part of comprehensive traffic safety systems.

Additional applications include airport and terminal protection, critical infrastructure security, logistics zones, industrial facilities and temporary safety areas in urban environments. The product is covered by a manufacturer's warranty and made exclusively from premium materials.

Our company has many years of experience in road safety equipment. We are a manufacturer and direct importer, well known and trusted across European markets. Most products are shipped directly from our warehouse, ensuring fast delivery and an excellent price-to-quality ratio.

Unsere New Jersey Betonsperre ist Stahlbewehrt, sie kann Einzel und im Verbund aufgestellt werden. Ideal zum Strassensperren, als Fahrbahnbegrenzung, Parkplatzabspernung, auf Events/Veranstaltungen und vieles mehr.
