

BetonBlok 240x60x60

SKU: LEG 240x60x60

Gross Price: Kč 6,276.88

Net Price: Kč 5,187.52

Technical Specification

Attribute	Value
Dimension	240 x 60 x 60 cm
Color	Grey
Material	Beton C30 / 37
Weight	2000 kg
Shipping time	7-14 days

Description

BetonBlok 240×60×60 cm - Ultra-Long Modular Concrete Block for Maximum Structural Stability

The BetonBlok 240×60×60 cm is the longest modular concrete block in our product line, designed for projects that require exceptional rigidity, load capacity and rapid construction of extended walls. Manufactured from premium C30/C37 structural concrete, this extra-long block ensures superior stability while significantly reducing the number of elements needed in large-scale installations. Its advanced interlocking design allows for fast assembly without mortar or permanent foundations, making it ideal for industrial, agricultural and construction environments.

Technical Specifications

- Model: BetonBlok 240×60×60 cm
- Material: C30/C37 high-strength concrete
- Construction: Interlocking studs for precise modular alignment
- Weather Resistance: Designed for long-term outdoor exposure
- Fire Classification: **BetonBlok elements with widths of 60 and 80 cm meet fire-resistance requirements in accordance with EN 13501-2.**

Main Advantages of BetonBlok

The extended length of the BetonBlok 240×60×60 cm allows for unmatched construction efficiency. Long walls, dividers and protective barriers can be erected significantly faster and with fewer connection points. This reduces labour time, improves structural continuity and minimizes installation cost.

Like all BetonBlok products, this model is fully modular, reusable and repositionable. The block is covered by a full warranty, and the materials used follow strict European production standards, ensuring long-term performance even in the harshest industrial conditions.

Primary Application Areas

- large-scale retaining walls
- bulk material storage bays and high-capacity bins
- industrial protective walls and boundary structures
- hall and warehouse internal divisions

- construction-site infrastructure and heavy-duty separation walls

Additional Application Ideas

- noise-barrier walls along traffic or industrial routes
- structural reinforcement for slopes and landfills
- ballast blocks for stabilizing temporary constructions
- heavy perimeter blocks for security-sensitive zones
- stable base foundations for modular buildings or machinery

Why Choose BetonBlok?

Our company has supplied BetonBlok products across European markets for many years and is known for reliability, fast delivery and uncompromising quality. Whether working with wholesalers or individual contractors, we maintain top-level standards and cooperate exclusively with certified manufacturers.

Customers praise BetonBlok for its incredible durability, efficiency and the excellent price-to-quality ratio. Combined with our probably fastest delivery times on the market, the BetonBlok 240×60×60 cm is a trusted solution for large-scale, professional construction.
