Popis

Road speed bump / modular traffic calming hump 1.5 m - 7 cm, yellow/black, reflective, PVC recycled

Dimensions (set length): 1.5 m

Height: 7 cm

Construction: 2 end pieces + middle pieces (alternating yellow/black)

Material: recycled PVC

Reflectors: 4 reflective inserts per module

Mounting: expansion anchors directly to asphalt/concrete/paving (except granite setts)

Use: non-public roads (private/internal roads, company sites, estates, car parks)

Product overview - a compact, effective speed control solution

This **1.5 m modular speed bump (speed hump / road bump)** is designed to immediately improve safety by forcing vehicles to slow down to approximately **5-8 km/h** in sensitive areas. The alternating **yellow and black** modules create strong contrast and, together with **reflective elements**, provide excellent visibility both **day and night**. The result is simple: better speed discipline, fewer risky manoeuvres, and more predictable traffic flow in private and internal road networks.

Key technical features that matter in everyday use

The set is built from **recycled PVC (PVC recyclate)** - a material chosen for durability, flexibility and long outdoor service life. The bump is **weather-resistant** and engineered for year-round use. Each element includes **4 reflective inserts**, which increase driver awareness at entrances, gates and parking lanes. The modular design is practical: **end sections (25 cm width)** form smooth transitions, while **middle sections (50 cm width)** build the working length of the bump. The inner modules follow the **yellow/black alternating rule**, giving a professional traffic calming layout.

Benefits - what you gain by installing this 1.5 m speed bump

You gain an affordable, fast and measurable improvement in safety: reduced speed near pedestrians, improved control at site entrances, and enhanced compliance with internal traffic rules. Because installation uses **expansion anchors**, the bump can also be **removed or relocated** if your traffic layout changes. This is ideal for companies, property managers and facility operators who need flexible road safety equipment.

Where it is recommended - intended use and practical scenarios

This product is intended for **non-public roads**: internal estate roads, private access roads, company premises, parking areas and restricted zones. It works especially well:

- at **car park entrances** and ticket barriers,

- next to **gates, boom barriers, chains and bollards**,
- on **residential estate roads** with limited access,
- in **industrial yards** and internal routes,
- near buildings with frequent pedestrian movement.

Five additional ways to use the product

1. Creating a low-speed zone before **security checkpoints and guardhouses**.
2. Calming traffic on **service roads** next to loading areas.
3. Speed reduction near **waste collection points** and shared internal lanes.
4. Supporting safe movement in **mixed pedestrian/vehicle zones** (warehouses, depots).
5. Temporary traffic control during **events, renovations or seasonal access changes**.

Quality, warranty, fast delivery and a trusted supplier

The product is covered by a **warranty**, and we use only **top-grade materials** from proven suppliers. We offer an outstanding **price-to-quality ratio** and what is likely the **fastest order fulfilment on the market**. Our company has been selling road safety products for many years, is well-known and trusted, and we are a **manufacturer of many items** as well as a **direct distributor**. We work only with the best producers able to meet strict quality standards. We deliver to many European markets for wholesale and retail customers, and most orders ship **directly from our warehouse**, ensuring **fast delivery** and reliable availability. Buyers who choose this speed bump are consistently satisfied with the decision.
